SUPERTRACK USE CASE

RFID+QR Code Ballistic Gear Inspection and Tracking

At Havoc, we are always looking for new and inventive ways to help our customers eliminate inefficient and expensive processes. Using Supertrack and our RFID+QR code technology for ballistic gear inspections and expiration tracking is one such use case.

Ballistic helmets, vests, and shields, to mention a few, require special care, handling, cleaning, storage, and regular inspection to ensure effectiveness. Each manufacturer and piece of equipment often have specific inspection and end of life / product expiration requirements. Multiple all of this by the amount of equipment in your inventory and it quickly gets out of control.

Get control over your gear and data with Supertrack.

Supertrack equipment tags feature both RFID and a QR Code.

Supertrack tags can be scanned by all devices - iPhones, iPads, Android phones and tablets, even old models.
